

# Rentokil

The Experts in Pest Control

## Flexi Armour Building Seal

**An impenetrable barrier of mesh for rodents**

Functional buildings with cladding, such as warehouses, food manufacturing and some retail premises, often have gaps between the cladding and the brickwork. These can offer a potential and accessible entry point for rodents to the cladding and, ultimately, to the internal areas of the premises.

Once in your building, rodents can continue to cause damage, carrying a range of diseases, as they gnaw through wiring, physically contaminate stock and ultimately impact your business' reputation.

The solution? A highly corrosion-resistant, flexible stainless steel knitted mesh that acts as an impenetrable barrier to rodents.

# Key features and benefits

---

- **Cost effective**

A long-lasting, highly corrosion-resistant solution that's more cost-effective than alternative solutions.

- **Flexible**

Easy to mould, wrap and stretch around structures, making it easier to block more entry points.

- **High-grade materials**

Prevents damage from pests, saving you money on any future repairs.

- **Easy installation**

Quick and easy to install around the perimeter of your building, offering fast protection of your premises

- **Lightweight**

>80% lighter than equivalent weld-mesh solutions

- **Galvanised wire**

Improved lifespan over galvanised wire, saving you time and money on replacement

- **Suitable for external and internal use**

Can be used indoors and outdoors, helping you protect the most vulnerable areas of your premises, wherever these may be

- **Versatile**

Can be applied to multiple surfaces/ materials, making it a versatile solution for premises' protection

## Why use Flexi Armour Building Seal

Flexi Armour Building Seal is part of Rentokil's Flexi Armour range of rodent proofing solutions.

It's a wire mesh that can be used as a strong, lightweight and flexible barrier. It can be swiftly installed around the perimeter of cladded buildings, covering gaps in the cladding or structure of a building so rodents can't use them to enter your premises. Mitigating the risk of rodent entry safeguards your premises from costly and time-consuming infestations.

An alternative solution to Building Seal is wire mesh which is time-consuming, labour-intensive and can look unsightly. Building Seal also typically takes half the installation time of chicken/weld mesh.
